

Figure numbers are wrong

Abstract. Problem with figure numbering, and how to fix it.

1 One

I ran across a problem with figure numbering in L^AT_EX. This uses the “documentclass” `svproc.cls`. I have not tried it on others.

2 Two

Figure 3 should be Figure 1. This is what the figure code looks like:

```
\begin{figure}
  \vspace{1cm}
  \label{fig:one}
  \caption{Blank figure}
\end{figure}
```

The second figure is the same, except that it uses `\label{fig:two}`.

3 Three

Figure 3 should be Figure 2. **This is what the figure code should look like to fix the problem:**

```
\begin{figure}
  \vspace{1cm}
  \caption{Blank figure}
  \label{fig:one}
\end{figure}
```

The only difference is that the `caption` comes before the `label`.
